Robert-Mayer-Straße 1-9: 21 West

Project 21 West, also known under the former name Therapoda, is being built on part of the former AfE site. It will be in the immediate vicinity of the two high-rise towers 140 West and 99 West. The entire building ensemble was designed by a consortium consisting of architects from "Cyrus Moser Architekten" and "Dietz Joppien Architekten".

GP Con has been commissioned to carry out the structural work.

Project outline 21 West:

Use:	Office and commercial building
Location:	Frankfurt am Main
Construction period:	October 2018 until January 2019
BRI:	25060.21 m ³
BGF:	6640.61 m ²
Floors:	6
Architect:	Cyrus Moser Architects
Client:	Groß & Partner Grundstücksentwicklungsgesellschaft mbH

After completion of the cellar case using the top-down construction method, on which both 140 West and 21 West are located, the building construction work began in October. As the construction work is taking place simultaneously on both construction sites, there are many overlapping issues which are solved day-to-day through good cooperation between all project participants.

The structural work has now been completed. On the 6th floor, the attics and technical superstructures are still being constructed and the shafts are being closed. On the standard floors, masonry work has begun on the TGA shafts.

Thus the project will be completed successfully and handed over to the client on schedule and in the required quality.
